

Admin Payment

Install and configuration guide. Adds a payment method that only ever appears when an admin places or edits an order - never on the storefront, in the REST checkout API, or in GraphQL.

PACKAGE	MODULE	REQUIRES	LICENSE
blueprint3d/module-admin-payment	BluePrint3D_AdminPayment	Magento 2.4.x PHP 8.1-8.5	Proprietary EULA

1 What it does

Purchase Order and the other core offline payment methods have one on/off switch - enabling them makes them selectable everywhere. Admin Payment is a separate method built specifically to be selectable only from the backend.

Once enabled in configuration, it appears as an option whenever staff create or edit an order in **Sales > Orders**. It never appears as a choice on the storefront, and it cannot be selected through the REST checkout API or GraphQL either - it is not a visibility toggle bolted on top, it is built into the payment method itself.

NOTE Purchase Order and any other existing payment methods are untouched by this module - nothing about how they work for customers or admins changes.

2 Installation

1 Install via Composer

```
$ composer require blueprint3d/module-admin-payment
```

2 Enable the module

```
$ php bin/magento module:enable BluePrint3D_AdminPayment
```

3 Run setup upgrade

```
$ php bin/magento setup:upgrade
```

4 Compile and flush cache

```
$ php bin/magento setup:di:compile
$ php bin/magento cache:flush
```

3 Configuration

Admin Payment ships disabled, the same as any other offline payment method. Turn it on in:

Stores > Configuration > Sales > **Payment Methods** > Admin Payment

FIELD	CONTROLS	DEFAULT
Enabled	Turns the method on or off entirely.	No
Title	Label shown against the method wherever it appears.	Admin Payment
New Order Status	Status applied to orders placed with this method.	Pending Payment
Payment from Applicable Countries	All countries, or a specific list - same as any other method.	All Allowed Countries
Minimum / Maximum Order Total	Order-total range the method will offer for.	None
Sort Order	Position among other payment methods in admin.	0

4 Placing an order with it

1 Open Sales > Orders > Create New Order

Add the customer, items, and addresses as usual.

2 Set the shipping method first

Choosing a shipping rate reloads the payment panel - settle shipping before touching the reference field below.

3 Select Admin Payment

It appears alongside the other enabled payment methods, once turned on in configuration.

4 Enter a reference - optional

A free-text **Transaction / Receipt Reference** field for your own accounting records. Not required, not validated.

5 Submit the order

Enter the reference right before submitting, as the last thing you do on the page.

BUILT IN If you do change shipping or the address again after typing a reference, the field remembers what you typed and restores it - you do not lose it by going back a step.

Whatever you enter shows up wherever the order's payment method is displayed - the admin order view, invoices, and the customer's own order view - directly under the method name:

PAYMENT INFORMATION

Admin Payment

Reference **INV-4471-B**

Left off entirely when no reference was entered.
